Lab F: Configuring search

Lab B missing items

Create Contracts Doc Lib in cktraining/sales sub site to use later

cktraining/sales

- Contracts Doc Lib in sales sub site to use later
  - add document titled Contract alpha financials (used Exercise 3: Create an audience targeted search web part)

Lab·F·Exercises:¶

1. Exercise·1:·Run·a·query·in·mode
2. Exercise·2:·Search·across·associa
3. Exercise·3:·Create·an·audience·t

Create Contracts Doc Lib in cktraining/sales sub site to use later

- add document titled Contract alpha financials (used Exercise 3: Create an audience targeted search web part)

- Finding contract & shoe – Search Experience has change slightly – scope is shown in Search bar.
- When is shoe value added?

Exercise 1: Run a query in modern Lab F

In this exercise you will run a query using metadata in modern search and then elevate it to an organisational search query.

add Doc Lib to sales
or Use CustomerAlpha

1. Login to Microsoft 365 and open the sales site https://[DOMAIN].sharepoint.com/sites/[YOUR NAME]cktraining/sales and replace [DOMAIN] with your tenant domain

Lab D cktraining/sales
Not Created Yet

2. Open the Contracts document library

add docs manually with Shoe in it

Note: For organizations using Multi-Geo Capabilities, site templates only work when sites the same geo-location as the hub site.

Task: Create Document Library in CustomerApha site Lab F Ex 2

Task: Create some new documents and then search for them across hub sites.

1. Open the Customer alpha site **https://[DOMAIN].sharepoint.com/sites/[YOUR NAME]CustomerAlpha**
2. Create a new document in the Documents library called 'sales contract ford 123' and add the word 'shoe' into the document and close the document
3. Open the Marketing site at **https://[DOMAIN].sharepoint.com/sites/Marketing** (Or click on [YOUR NAME] - Marketing on the top left nav, as it's linked through a hub association)
4. Create a new document in the documents folder called 'sales contract kia 456' and add the word 'shoe' into the document and close the document
5. Wait a few minutes for the crawl to run (Can take up to 5 minutes)

Exercise 1: Run a query in modern
using metadata in modern search and then elevate it to an organisational search query.

1. Login to Microsoft 365 and open the sales site https://[DOMAIN].sharepoint.com/sites/[YOUR NAME]cktraining/sales and replace [DOMAIN] with your tenant domain
2. Open the Contracts document library
3. In the search box type 'contract'
4. Press **Enter** to see the full search results page
5. In the results pop up box click on the **Expand search to all items in this site**

may not show with one document

Now that you are at the site level for results you also get the sites included that host the documents and from here you can elevate your search to the organizational level

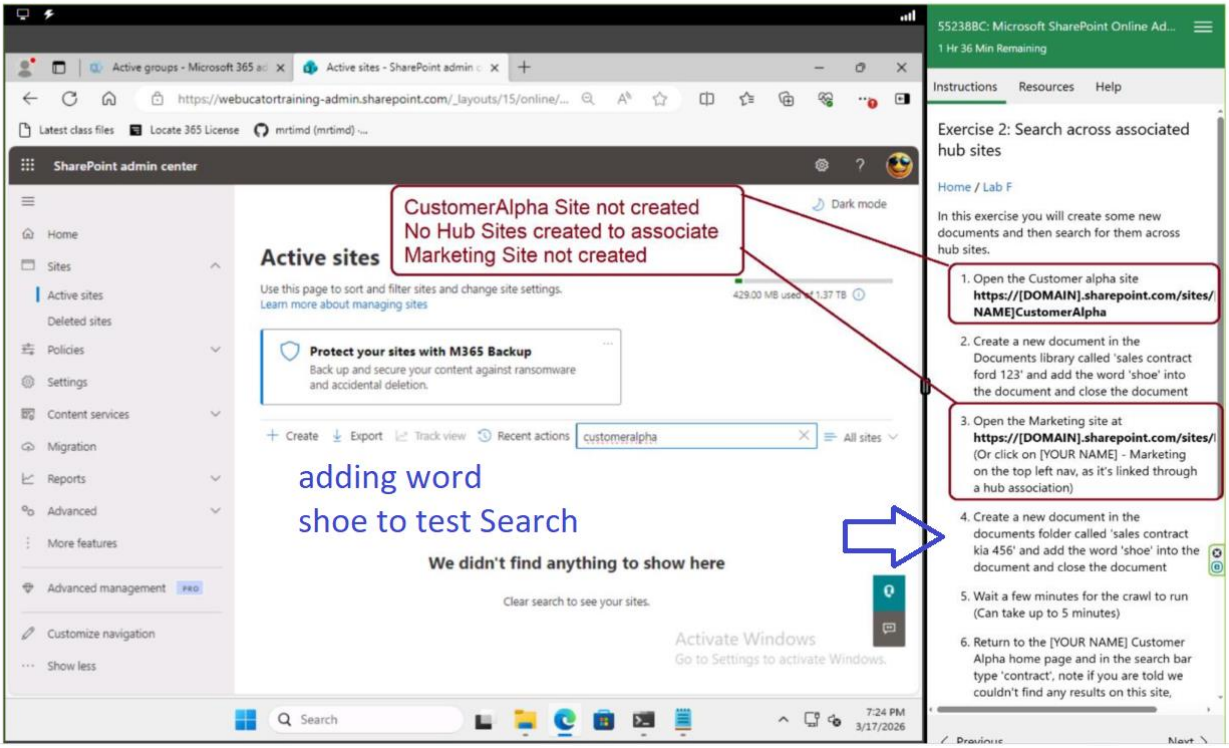
6. Click on Organization in the navigation to do a top-level search and notice that you now get more options in the filter and content type
7. In the search box type the word 'shoe' and press **Enter** - select files in the tabs
8. You should now get 2 results listed
9. Now change the query to **contract AND shoe AND sales** and press **Enter**

what doc has "shoe"

Lab F

Exercise 2: Search across associated hub sites

Task: Create missing sites/hubs/associations



Task: Create CustomerAlpha Site & Associate to Marketing Hub

To associate a SharePoint (SPO) site to a hub, navigate to the site, select **Settings** > **Site information**, and choose the desired hub in the **Hub site association** menu. Alternatively, administrators can use the SharePoint admin center under "Active sites" to connect one or multiple sites to a hub, which enables shared navigation, theme, and search scope.

Task: Associate a SharePoint site with a hub site - Microsoft Support

Method 1: Via Site Settings (Site Owner)

1. Navigate to the SharePoint site you want to associate.

2. Click the **Settings** gear icon in the top-right corner.

3. Select **Site information**.

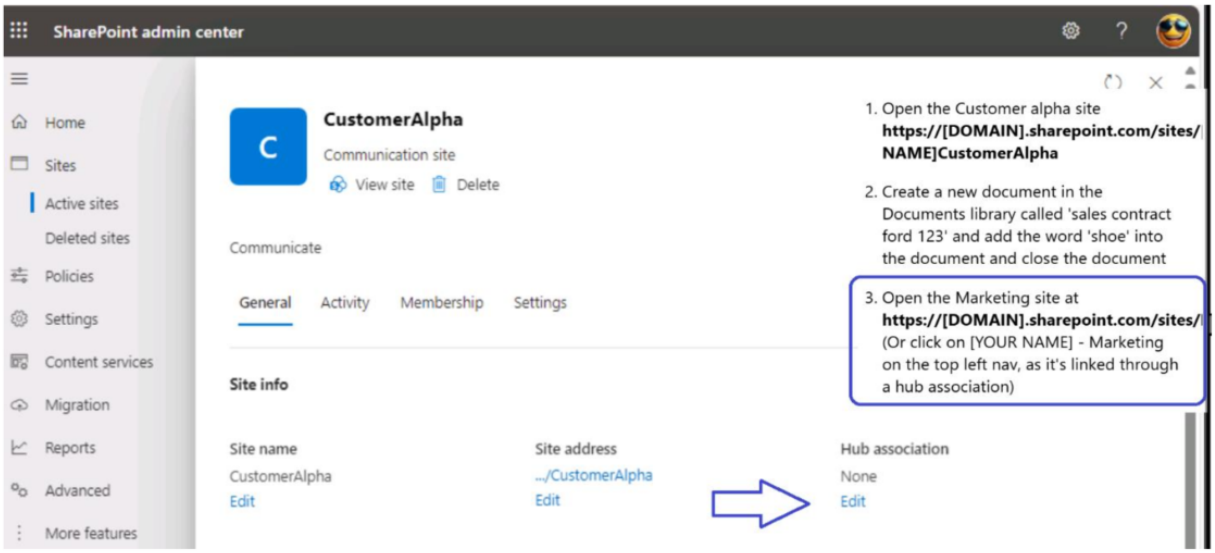
4. Under **Hub site association**, select the hub site you want to connect to.

5. Click **Save**.

    3. Check the box next to the site(s) you want to associate.

    4. Select **Hub** from the menu bar, then **Associate with a hub**.

    5. Choose the hub site and click **Save**.



Note: For organizations using Multi-Geo Capabilities, site templates only work when sites are in the same geo-location as the hub site.

Lab F ex2

Task: Create Document Library in CustomerApha site

Task: Create some new documents and then search for them across hub sites.

2 shoe docs

1. Open the Customer alpha site **https://[DOMAIN].sharepoint.com/sites/[YOUR NAME]CustomerAlpha**
2. Create a new document in the Documents library called 'sales contract ford 123' and add the word 'shoe' into the document and close the document
3. Open the Marketing site at **https://[DOMAIN].sharepoint.com/sites/Marketing** (Or click on [YOUR NAME] - Marketing on the top left nav, as it's linked through a hub association)
4. Create a new document in the documents folder called 'sales contract kia 456' and add the word 'shoe' into the document and close the document
5. Wait a few minutes for the crawl to run (Can take up to 5 minutes)
6. Return to the [YOUR NAME] Customer Alpha home page and in the search bar type 'contract', note if you are told we couldn't find any results on this site, refresh the search

Once the crawl has finished updating, select the Files tab you will see one search result from the current site, note that you can see the parent hub site in the breadvcrumb trail, select [YOUR NAME] - Marketing to see all documents only from the associated hub sites

7. Click on **Organization** to expand the search beyond the hub sites, notice you now get many more results covering all sites

Exercise 3: Create an audience targeted search web part

Exercise 3: Create an audience targeted search web part

26. We have enabled audience targeting in the web part, this means that we can configure the library so that the files only appear to specific audiences, to do this, navigate to **https://[DOMAIN].sharepoint.com/sites/[YOUR NAME]cktraining/sales/**
27. Select the '**Contracts**' library
28. Click on the **Cog** and then choose **Library settings**
29. In Library settings select **More library settings**
30. Under the heading 'General Settings' select **Audience targeting settings**
31. Select **Enable audience targeting**
32. Then at the bottom of the page, click **OK**
33. In the breadcrumb trail at the top of the page click on **Contracts**
34. In the Contracts library, 'right click' on the document titled **Contract alpha financials** and select **Details**
35. In the details pane, scroll down and click on the 'Audience' field and enter **Marketing** and then select **[YOUR NAME] - Marketing Members** , when looking at a web part utilising audience targeting, like our highlighted content webpart on the marketing page, only people in this group will see the file (you can add up to 10 security groups)
36. Click away from the field to apply the property, then with the details pane still open, remove the tick from the Contract alpha financials document, then place a tick next to the Sales contract alpha document
37. With the Sales contract alpha document selected, the details pain will show the properties for this file, this time scroll down to the 'Audience' field and enter **CK Training** and select **[YOUR NAME] CK Training Members**

Exercise 3: Create an audience targeted search web part
Home / Lab F

34. **Task**: In the Contracts library, 'right click' on the document titled **Contract alpha financials** and select **Details**

where are these created?

35. In the details pane, scroll down and click on the 'Audience' field and enter **Marketing** and then select **[YOUR NAME] - Marketing Members** when looking at a web part utilising audience targeting, like our highlighted content webpart on the marketing page, only people in this group will see the file (you can add up to 10 security groups)

36. Click away from the field to apply the property, then with the details pane still open, remove the tick from the Contract alpha financials document, then place a tick next to the Sales contract alpha document

37. With the Sales contract alpha document selected, the details pain will show the properties for this file, this time scroll down to the 'Audience' field and enter **CK Training** and select **[YOUR NAME] CK Training Members**

38. Click away from the field to apply the property then close the details pane, we have now configured these files to display to different audiences when viewed through a webpart that has audience targeting enabled

Lab G: Configuring apps

The course manual includes exercises for SharePoint Apps but Microsoft is retiring them starting in
